

Javascript Validator

Use Online Javascript Validator to validate javascript code and find errors and warnings of your code that can be fixed. See real time code validation and fix errors and warnings of your code as you type. After coding is complete, format your javascript code.

```
16
17- /***** helper function *****/
18- /* create a function called recalculate() which will
19-    - create a variable to represent the calculated-cost span element. That will look something like:
20-    // let costLabel = document.getElementById("calculated-cost");
21-    - check the value of the modelName variable, and use that to calculate the new total cost:
22-    e.g. if modelName is currently "XYZ", duration * 100 gives us the new total cost.
23-    if modelName is currently "CPRG", duration * 213 gives us the new total cost.
24-    - set the value of the calculated-cost element's innerHTML to this new value.....
25- */
26
27 // INSERT YOUR CODE HERE
28- function recalculate(){
29-     let costLabel = document.getElementById("calculated-cost");
30-     if(modelName == "XYZ"){
31-         costLabel.innerHTML = 100*duration ;
32-     }
33-     else{
34-         costLabel.innerHTML = 213*duration ;
35-     }
36- }
37
38- /***** model button logic *****/
39
40- <
